(54) Title: SYSTEM AND METHOD FOR SMOOTHING SEAMS IN TILED DISPLAYS

(57) Abstract: The present invention provides method for producing a substantially seamless video image on a display surface. The method comprises the steps of separately projecting at least a first and a second video image onto a display surface such that a seam is defined by overlapping portions of said first and second video images. Inside the seam, the brightness of the first video image and the brightness of the second video image are adjusted electronically so as to provide a uniform brightness profile.
